

Join the Future of Bitcoin Investing

The Bitcoin Discovery Fund by EnergyFunders

✓ Receive regular payouts of bitcoin from our off-grid mining

✓ Powered by natural gas for greater operational and regulatory risk mitigation

✓ Targeting high returns in an off-stock market asset

✓ Invest with as little as \$5,000

Why bitcoin?

Bitcoin is a digital currency with high market demand and excellent liquidity. With a hard supply cap of 21 million coins, bitcoin provides protection from inflation and devalued currency.

Companies and countries around the world continue to accept Bitcoin as a valid currency and payment method, with credibility growing daily. Investing in bitcoin mining offers a way to earn high returns while supporting the future of technology.

About Our CEO

Laura Pommer is the CEO and Chief Geologist of EnergyFunders. She previously served as the CEO of a private equity backed oil and gas company, where she first became involved with off-grid bitcoin mining. Laura's combined experience in both oil and gas and bitcoin makes her perfect for executing on our off-grid mining investments.

Accumulate Bitcoin Throughout the Life of the Fund

Bitcoin mining offers the opportunity to accumulate bitcoin at below-market prices.

No more speculating on price movements to earn a return. Earn periodic payouts of bitcoin at potentially below market costs.

Benefit From a Vertically Integrated Mining Model

Sourcing gas direct from the wellhead provides cost-advantaged power, insulated against higher energy prices.

Plus, on-site power generation eliminates reliance on the electrical grid – providing resilience against blackouts and other disruptions.

Lower energy costs and greater operational control provide a key competitive advantage.

Protection Against Inflation

Bitcoin's fixed supply creates a store of value. With inflation running high, bitcoin offers a hedge against devalued currency. The investment community increasingly views bitcoin as a version of digital gold.

The Benefits of Investing in the Bitcoin Discovery Fund

High Potential Returns

Investments structured to reduce your tax bill and drive attractive returns.

Enjoy attractive returns without betting on higher bitcoin prices.

Participate in the best performing asset class of the last decade.

Targeting high IRRs, plus inflation protection.

Accumulate bitcoin at a potential discount to market prices.

Vertically Integrated Mining Model

Vertically integrated mining model provides superior forecasts.

On-site power generation using wellhead natural gas creates key advantages.

Minimize risk exposure to higher commodity prices or electricity costs.

Enjoy lower operating costs versus grid energy, providing margin uplift.

Avoid reliance on a fragile electric grid, ensuring steady and reliable power supply.

Regular Payouts Plus Investment Growth

We aim to issue regular bitcoin payouts, while also compounding your capital.

Bitcoin we mine will be distributed to investors regularly, in proportion to their holdings with the remaining returns being reinvested.

Choose whether to receive monthly payouts in USD or bitcoin.
